

Navigating the future

Transforming the dynamics of R&D fleet management

In a world where technology and innovation move at lightning speed, businesses often grapple with managing complex processes such as Research and Development (R&D) fleet management.

Siloed teams, rising costs, complex vehicle reservations, and inefficient processes are just some of the hurdles businesses encounter. To bridge these gaps and propel businesses into a more streamlined future, we introduce our R&D fleet management solution.

Designed with precision, it answers the call for a flexible, efficient, and innovative approach to manage your unique operational challenges. This solution is not just an upgrade to your system, but a catalyst that thrusts your business into a new era of efficiency and growth.

Transforming your challenges into opportunities

- **Specialized software:** This is a specialized solution for R&D fleet management, a niche area in the automotive industry, streamlining processes for optimal results.
- **Manual processes:** We understand that many departments rely on manual and inefficient processes. Fleet Manager transforms these, by digitizing and automating workflows via Jira Service Management (JSM).
- **Decision-making and coordination:** Fleet managers frequently face the challenges of intricate coordination and decision-making. Our solution simplifies this by capturing knowledge, understanding workflows, and providing a user-centric solution that meets the needs of the end-users.
- **Multiple programs and departments:** Organizations often juggle multiple R&D programs. Our solution offers a modular approach, enabling customized workflows for different departments and programs.
- **Data accuracy and auditability:** Without a centralized system, maintaining accurate records can be challenging. Fleet Manager consolidates data in JSM and Assets, ensuring accurate tracking, easy access to historical information, and auditability.
- **Support and maintenance:** We stand by you after the implementation. We offer optional support and maintenance to ensure your system stays up-to-date, optimized, and supported by the Atlassian platform.

Core elements of R&D fleet management

JSM integration	Fleet Manager leverages Jira Service Management (JSM) to manage end-user requests efficiently, with optimized workflows and automated approvals.
Integrated asset management	Fleet Manager facilitates the management of vehicle properties and integrates asset information from Jira Service Management. This involves configuring JSM's Assets tooling to track and manage essential data related to vehicles, such as vehicle specifications, ownership, and reservation history.
Customized user interface	Fleet Manager provides a bespoke interface for both the end-user testers reserving the vehicles and the fleet managers who are responsible for the vehicles' use and availability.
Flexibility	Fleet Manager is architected to accommodate data from multiple database products and integrates seamlessly with Atlassian tools. This flexibility allows it to meet the needs of customers with diverse enterprise landscapes.

R&D Fleet management workflows can often include:

- **Vehicle onboarding:** Collect vehicle information, assign unique identifiers, and register vehicles into the fleet management system.
- **Reservation management:** Request, approve, and allocate vehicle reservations based on priorities, project requirements, and availability.
- **Vehicle loan/transfer requests:** Allows for seamless transfer of vehicles between fleets or locations.
- **License plate and fuel card management:** Enables assignment of license plates and fuel cards to vehicles within the User Interface (UI).
- **Vehicle offboarding:** Retire or remove vehicles from the fleet by documenting and archiving vehicle records, updating asset management systems, and notifying stakeholders.

Note: Every customer has unique needs; therefore, Valiantys offers this customizable solution, enabling the inclusion of any workflows necessary for the business to achieve success.

Embrace the empowering business benefits:

Boost efficiency and productivity: Automate manual tasks, streamline operations, and free up resources with Fleet Manager. Empower your teams to focus on core tasks and achieve success.

Seize real-time visibility and collaborate effectively: Stay updated on vehicle statuses and schedules to seamlessly collaborate and optimize resource allocation. Take full control of your fleet operations for maximum efficiency.

Improve decision-making: Harness data insights and analytics in Fleet Manager to enhance decision-making regarding resource allocation and fleet performance. This leads to optimized resource efficiency, minimized downtime, and the ability to plan proactively.

Seamless Integration and Scalability: Fleet Manager integrates with your Atlassian ecosystem and can be scaled to meet your evolving fleet management needs.

Unlock unmatched support and expertise: Gain access to Valiantys' expertise and dedicated support throughout implementation and maintenance. Experience top-notch service quality and maximize the value of your fleet management system.

Why choose Valiantys: Your Partner for Fleet Management Excellence

As an Atlassian Platinum Solution Partner, Valiantys brings deep expertise in implementing and customizing Atlassian products. This ensures a seamless integration of Fleet Manager with your existing Atlassian ecosystem.

Extensive Experience: We have decades of experience in delivering successful enterprise software solutions. Our proven track record in implementing efficient fleet management systems for renowned organizations speaks for itself.

Innovative solution that stands apart: We developed Fleet Manager, a unique and comprehensive solution specifically designed for R&D fleet management. This sets it apart from generic fleet management software. Its automated workflows, centralized asset management, and real-time visibility empower organizations to streamline processes, enhance collaboration, and make informed decisions for optimal fleet management.

Customization and Scalability: We understand that every organization has unique requirements and processes. That's why Fleet Manager is highly customizable, allowing for tailored configurations that align with your specific needs, ensuring maximum efficiency and scalability as your fleet management needs grow.

Dedicated Support and Ongoing Maintenance: We provide dedicated support and maintenance services to ensure the smooth operation of Fleet Manager. Our team of experts is always ready to address any concerns, provide assistance, and keep your system optimized and up-to-date, allowing you to focus on your core business activities.

Conclusion

Choosing to partner with us at Valiantys means entrusting your needs to a trusted Atlassian Platinum Solution Partner with extensive experience in delivering successful enterprise software solutions.

Our fleet management solution's innovative features, combined with our expertise, empower your organization to overcome the challenges of R&D fleet management, optimize processes, and achieve unparalleled efficiency. **Reach out to us today to begin a transformative journey towards a streamlined fleet management system tailored to your unique needs.**
